

Q Lawns

Q Lawn is grown on dark, organic, free-draining soils - the best soil type for the production of high quality turf. These soils contain high populations of beneficial microbes and it is this that gives the turf its dark green sward.

A turf is a piece of soil with a mixture of selected grass varieties growing in it. It will be harvested to order, ensuring optimum freshness; Q Lawn is sliced from the ground and as with any turf will suffer if not cared for. Water is essential in the early stages of growing; your lawn will need some careful nurturing until it has established.
