

Edging and Kerbs

Kerbing is a key detailing element and you'll want to get it right. Our specialist expertise will help you achieve the perfect combination of function and aesthetics, from the tried and tested to the stunning textured finish of the

Concrete bedded edgings and kerbs are used wherever a rigid support or restraint is required at the perimeter of a pavement. They are essential for block paving and tarmac driveways, and can be used for all other types of paving. All edgings or kerbs, other than mowing strips, need to be bedded onto a medium strength concrete base.
